

We will be learning about our gardens and the creatures that live there.

Changes in Springtime/frogs and frogspawn

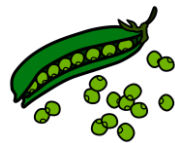

We will be finding out about the changes we can see in Spring time and the lifecycle of a frog.

*Planting and growing in the garden*

*We will be planting some sunflowers and some beans or peas. We will find out what these seeds need to help them grow into plants.*

*Snails and worms*

*We will look for snails and worms in the Nursery garden and collect some snails to study in a tank.*

**Caterpillars and butterflies**

We will find out about caterpillars and how they change into butterflies. We will complete some art work to create our own beautiful butterflies.

**Ants and Beetles**

We will also find out about ants and beetles that live in our gardens. We will ask questions about them, such as, are they good or bad for our gardens? What do they look like? Where do they live? And try to find out the answers.

**Garden party**

To complete our topic, we will dress-up and make some food for a garden party celebration.

We will also be learning:

- To recognise numbers to 5, to 10 then to 20 and order them
- To recognise and name 2D shapes
- Simple measuring and problem solving
- Continue with our letter of the week and then begin to build simple words
- Continue to write letters correctly and to write our own names
- To develop our friendships

# Out and About
